

# Protecting the Skin THAT PROTECTS US

by Jennifer Savedge

## Success with Tetrasil Ointment!

Aidance Skincare receives many great testimonials. One customer who used Tetrasil to get rid of her cold sore outbreaks wrote, *"I would always get a cold sore if I was too stressed or ate too much of an acidic food (fruit, sauce, salsa, etc...). But, since using Tetrasil, I haven't had any breakouts, as long as I use it when I feel a tingle on my lip. It is a blessing not having to worry about getting one of those ugly cold sores on my mouth."* Another customer writing about bacterial vaginosis said, *"Tetrasil is the only thing that worked. What's even better is that the problem hasn't come back ever since. I think Tetrasil chased the vaginosis out of town for good!"*

**D**O YOU HAVE BLEMISHES, cold sores or other signs of bacterial or viral infections that you want to eliminate? Our skin is our armor, our first line of defense against dirt, ultraviolet rays and toxins. Our skin is also under constant attack from invaders like bacteria, viruses, and fungi. These germs are responsible for skin conditions that include cold sores (herpes), athlete's foot, warts, folliculitis, yeast infections and ringworm, causing itching, rashes, redness, and burning. Further, these skin conditions weaken the ability of our skin to perform its vital functions.

The best way to heal these skin conditions and keep them from causing excessive damage to our delicate skin is to remove the toxins at their source. Your skin will always harbor some harmful microorganisms. The problem occurs when these multiply and take over. That's when you develop blemishes, cold sores and other signs of imbalances. Tetrasil®, a multi-purpose topical ointment from Aidance Skincare, is a powerful product to help maintain normal bacterial, fungal, and viral populations and thus relieve your skin of ugly sores and discomfort.

## HOW DOES IT WORK?

Besides jojoba oil, beeswax and essential oils, making it a terrific all-natural, multi-purpose skin conditioner, Tetrasil's key and totally unique ingredient is a patented compound called Tetrasilver Tetroxide (TsT™). TsT belongs to a unique family of molecules called "electron-jumping compounds" that are extremely potent foes of the bad guys on your skin. TsT is a single molecule comprised of four silver atoms and four oxygen atoms. Independent testing has shown that TsT is strongly attracted to rapidly proliferating pathogens like bacteria, viruses, protozoa, and fungi. The chemical reaction that results when TsT comes in contact with these harmful microorganisms is powerful. It binds with the pathogen, releasing both a micro-electrical charge and oxygen. The electrical charge kills the pathogen, destroying its ability to proliferate and cause further damage. And the influx of oxygen from TsT helps to speed the healing process. The result is rapid relief of a wide spectrum of common destructive skin conditions.

## TETRASIL PASSED OUR TEST

Many companies make claims about the extraordinary uses of their product. But here at *Healthy Living* we research the science behind the claims before we consider recommending a product to our readers. And it is the science behind Tetrasil that really impressed us about this product. Fourteen independent research organizations have performed testing on TsT in order to evaluate its ability to destroy harmful microorganisms.

For your skin to look really beautiful, you need to achieve bacterial balance. Do you know how many skin conditions are caused by bacterial imbalances? From acne to cold sores, rashes, warts, and athlete's foot, bacterial and viral imbalances can wreak havoc on your outer appearance. Think of Tetrasil as a skin clarifier, a secret weapon to maintaining beautiful skin.

If you've been experiencing difficult skin conditions, see what a little bit of nighttime Tetrasil can do for your skin. Those blemishes just might be gone in the morning. ■
